New at HL

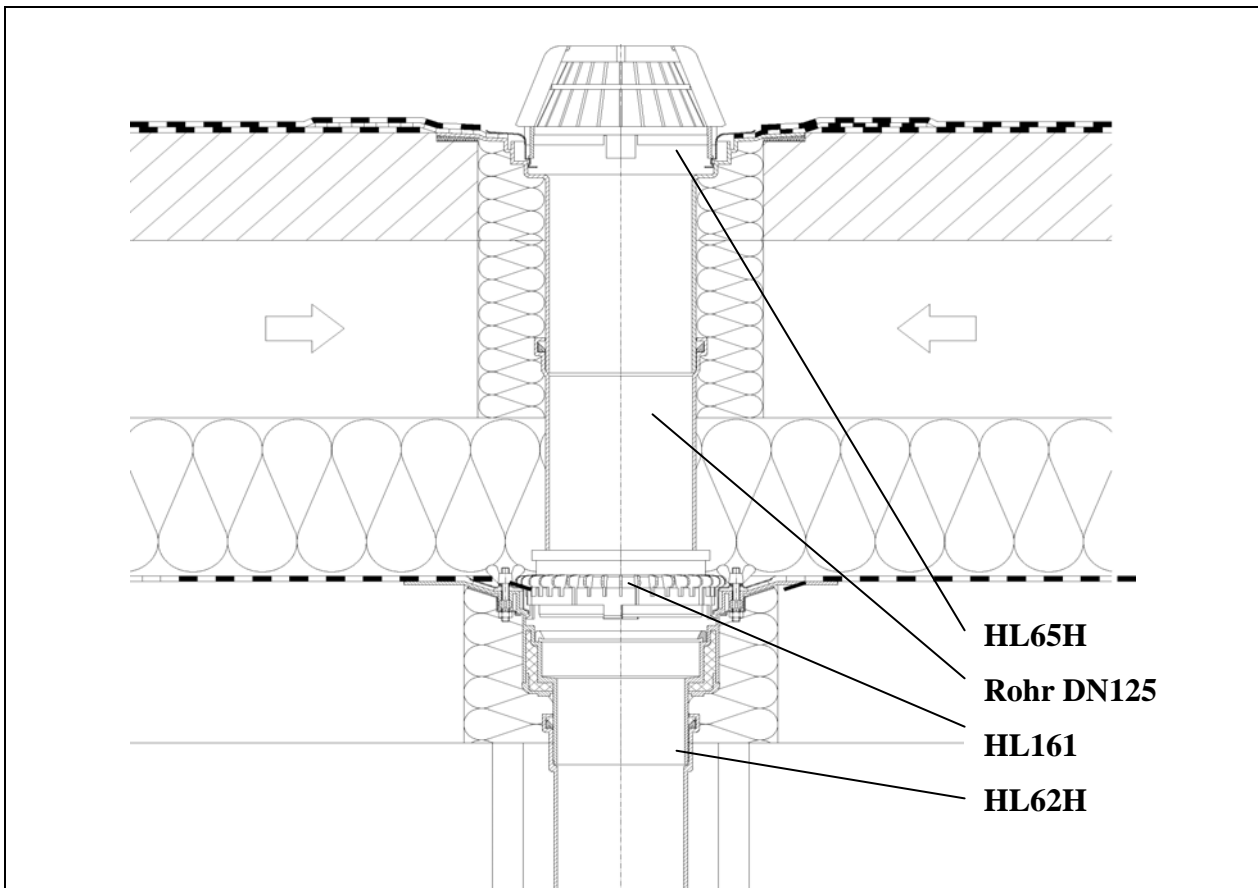

HL161 Drainage element for HL62, HL63, HL64 and HL69 series

HL65H

HL161

HL62H

Product description

In many cases it might be necessary or requested at flat roof constructions, to drain condensate or leakage water, which occurs between the upper waterproofing and the lower vapour barrier. Now this is possible by using the new drainage element HL161. The included ring leads the drainage water from the upper water proofing level directly into the drain and avoids the seeping of water into the thermal insulation. HL161 is delivered as a set, consisting of a ring and the drainage element.

Attitudes:

- **Size:** Ø170/127 x 60
- **Material:** PP Polypropylen
- **Package:** In PE bag
- **Weight:** 134 Gramm
- **EAN-Code:** 9003076034772
- **Price:** see price list
