

## HL 138H - In-wall siphon for condensate water with hygienic adapter

In most cases for the drainage of condensate water from e.g. air conditioners a siphon with water trap and additional mechanical closure (ball) is used. To fulfill advanced requirements relating to hygienic, HL created an extended version of its well-known siphon, called HL138H.

### Usage:

In buildings with advanced requirements on hygienic, like e.g. hospitals, clinics, care homes... (according ÖNORM H 6020:2015, respectively DIN1946-2:2008).

### Function:

By using the hygienic adapter the water film between downpipe and inlet to the siphon is interrupted. The water has to drip through a distance of 40mm, so germs and bacteria are not able to move from the sewer to the air conditioner. See also hygienic certificate as attachment or at [www.hl.at](http://www.hl.at)

**Price:** s. Price list

**Weight:** 0,30kg

**Package:** 10 piece in carton box, HxBxT 320x250x410mm

**Delivery from:** middle of November 2017
