Material change to PP (Polypropylen) for the drain body of the balcony and terrace drain series HL90

HL90

HL90K

HL90KH

Starting from May 2022 the balcony and terrace drain series HL90 will be delivered with a new drain body. This affects the articles HL90, HL90.2, HL90.2-3020, HL90K, HL90KH and HL90K-3020. The new drain body will consist of PP (polypropylene) instead of PE (polyethylene). The drain body can therefore only be plugged and not welded to the pipe.

The flat installation height of 57 mm stays the same.
