

HL protective lot covers to be uniformly black in future

Since 2023, our parts which are not permanently installed, such as the lot covers, have been manufactured from recycle.

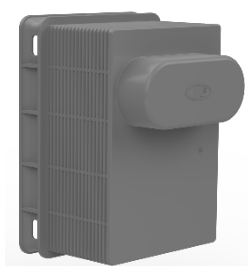

Our recycled material has no disadvantages in terms of composition, strength and durability compared to our conventional plastics. However, due to the composition of the material, there have been variations in colour of the parts.

To ensure a consistent visual appearance of the lot covers in future, they will be supplied uniformly in black.

To achieve the uniform black colour, a small amount of black colour additive is mixed into the recycled material.

The change affects only the colour of the protective lot covers; article numbers, scope of delivery, function, material basis and technical properties remain unchanged.

Some examples for visual comparison, as well as a list of the affected articles, are shown below.
