

HL440

Material change of the Recessed washing device trap DN40/50

From now on, the drain body of the HL440 washing machine trap will be manufactured from polypropylene (PP) instead of the previously used polyethylene (PE).

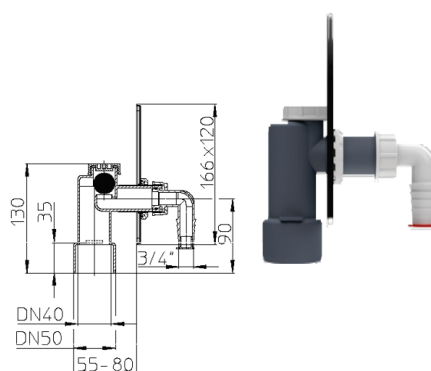

Due to this change, the connection of the washing machine trap to the waste pipe is now only possible using a push-fit connection. A welded connection with PE pipes is no longer possible.

HL440 Concealed washing device trap with mechanical

Data

Capacity	0,33 l/s
Material	PP
Connection dimension	1"
Outlet dimension	DN40/50
Standard	DIN 19541
Height of seal water	mechanical ball-trap
Recommended for	Siphoning of washing devices, little depth
Additional information	with chrome-plated cover
