

HL570, HL522 & HL520

Colour modification of the odor barrier, waste valve and hair strainer

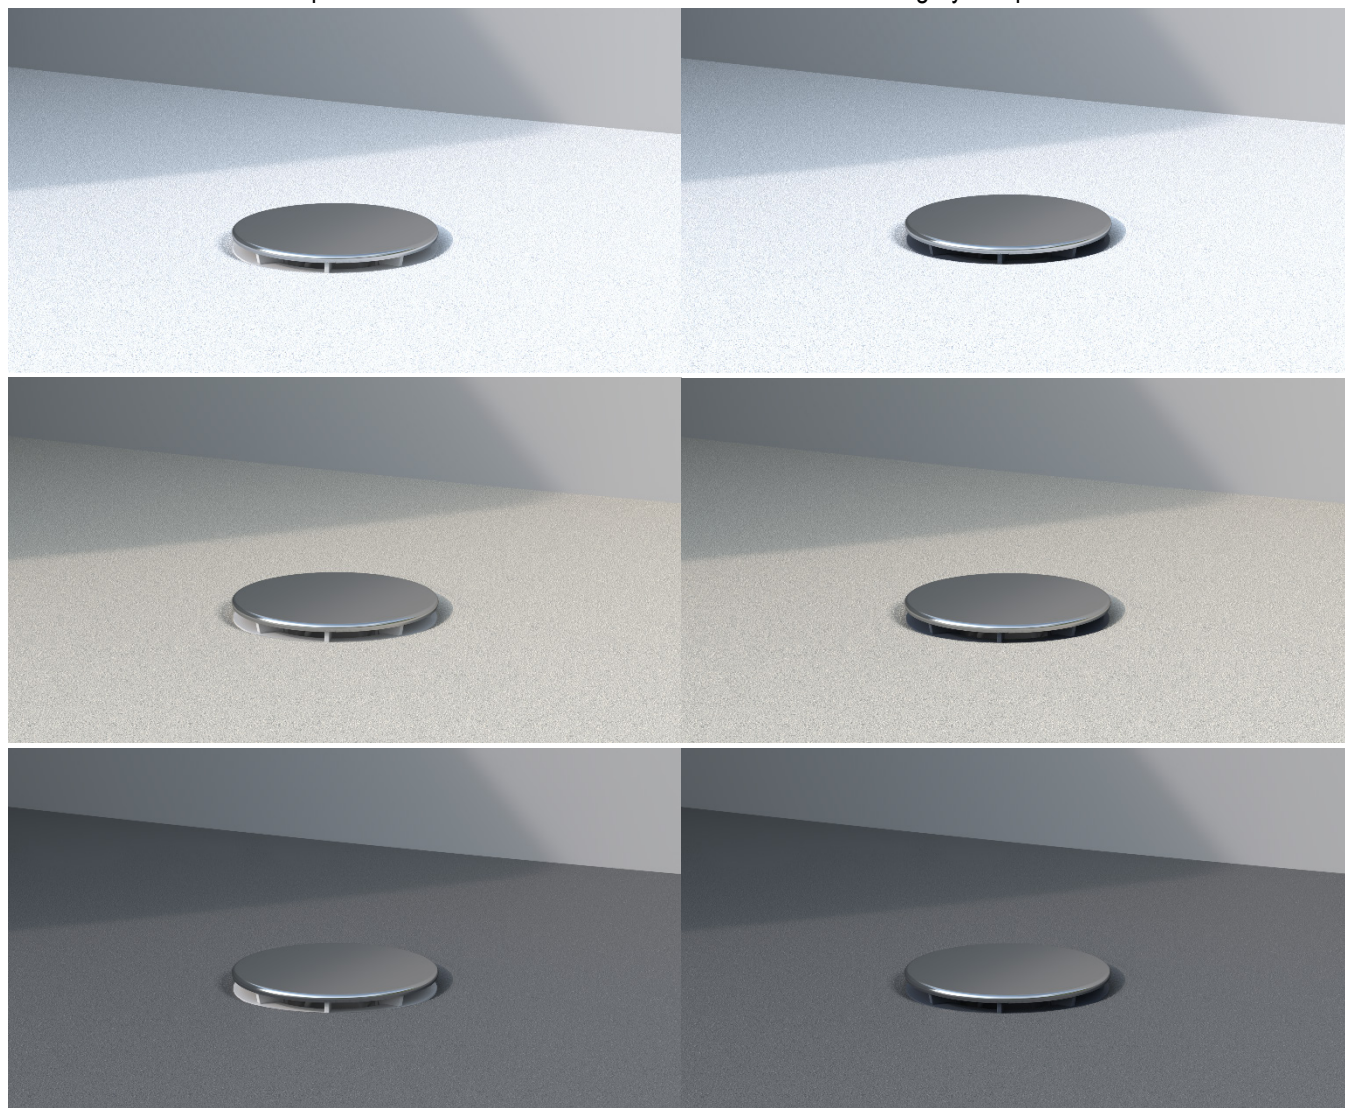

The color change is implemented for design related reasons. By using darker components, the result is a more decent visual integration in installed conditions to make the components less noticeable and allow them to blend more harmoniously into the overall picture.

This means that the following components – the odor barrier, the waste valve and the hair strainer – have been changed from white or blue color to dark grey color. This change affects the shower drain HL570FlexBox as well as the shower tray traps HL520 & HL522.

Below you can find a before-and-after comparison as well as a detailed list of the affected article.

White components

Dark grey components
