## HL Siphons for shower trays

### Basic information about design and installation

Basically HL supplies siphons for all usual shower trays, which are according to the standards. To select the right product, please notice the following criteria:

#### ▲ Hole diameter of the shower tray

The European standard HL 274 differs between shower trays with hole diameters Ø 52 mm or Ø 62 mm and Ø 90 mm. HL-shower tray siphons fit to designs, which are according to the European standard (conus, thickness...). To get the perfect tightness, one should take care to use products of high quality of the shower tray.

#### ▲ Capacity

All mentioned drain capacities of shower trays are values, which are tested under standard parameters. Trays with hole diameter Ø 52 mm and Ø 62 mm are tested with 120mm water height, trays with diameter Ø 90 mm only with 15mm, as more and more very flat shower trays are used because of the low entry level.

Of course the water coming from the shower should not be more than the capacity of the drain. We recommend to calculate with a certain cushion.

#### ▲ Maintenance and cleaning

To avoid the deinstallation of the siphon, every time the outlet is plugged, our traps are designed with either removable traps or hair catchers. With smaller hole diameters one should still plan an inspection door. At flat shower trays with hole diameter Ø 90 mm one do not need this. Therefore the siphon itself should be provided with an access to the waste pipe, when it is plugged. ATTENTION: Avoid cleaning with compressed air, as the connection parts in the siphon or in the drain pipe may be splitted.

#### ▲ Convenient in installation

HL offers it's shower tray siphons with rotatable ball-joints, which allow a very quick and also stressless installation.

#### ▲ Flat shower trays

Flat shower trays may be installed directly on the screed with a rest barrier of max. 2cm - and this still counts - acc. to ÖNORM B 3407- as „barriere-free“ installation and therefore as disabled-accessible. The mounting on the screed is cost and time saving - no extra

formworks have to be done on the building site. Beside of that, the waterproofing may be applied on one surface and is not interrupted by hollows or penetrations. With a conventional shower tray siphon (e.g. HL520F) this kind of installation is not possible - there is no way to connect the waterproofing to the siphon. Exactly for that reason HL570 FlexBox - as a complete system solution - was designed. Detailed information please see „product data“.
